**1. Do you think Alaskans are served well by the transportation system today?**

No, I would like to see more public and non-motorized transit. We should fix what we have and retool for the future.

**2. What do you consider the most critical transportation issues facing Alaska - today and into the future?**

With federal money declining, we need to focus on what we have now and how we can maintain and retool it for a future that can't rely only on cars.

**3. Overall, do you agree with the direction set by this plan? If you disagree, what direction would you like the plan to set?**

It is a decent analysis. It does however not take into account recent increases in costs of construction. Funds should be increased for maintenance, preservation and life cycle management.

**4. Based on the plan, what statewide priorities would you recommend for transportation investments (we are not looking for project-specific priorities)?**

Clearly we need more money for maintenance and preservation. We also need smarter transportation solutions linked with other parts of our society and economy.

**5. Of the actions listed, what would you consider the most important?**

Prioritization, as mentioned in Action 1.2 seems most important. Our priorities need to reflect the array of choices for transportation - not simply more roads for more cars.

**6. Are there additional actions that would strengthen the plan? If yes, please specify.**

Linking transportation plans with other community development will allow better integration of other forms of transit and not increase our reliance on cars.
